ORACLE Academy

14-2

PRIMARY KEY, FOREIGN KEY, and CHECK Constraints

Objectives

- This lesson covers the following objectives:
 - Define and give an example of a PRIMARY KEY, FOREIGN KEY, and CHECK constraint
 - Explain the purpose of defining PRIMARY KEY, FOREIGN KEY, and CHECK constraints
 - Demonstrate the creation of constraints at the column level and table level in a CREATE TABLE statement
 - Evaluate a business problem requiring the addition of a PRIMARY KEY and FOREIGN KEY constraint and write the code to execute the change

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

A SIMILITY SIME

Purpose

- As discussed in the last section, constraints are used to prevent invalid data entry into database tables
- What would happen if, surreptitiously or just through a careless mistake, your personal unique identification was given to another person?
- What if tomorrow at school someone else was credited with your classes for graduation or was able to eat lunch using your lunch-card number?
- Ensuring data integrity is what constraints are all about. After all, you're unique!

DP 14-2
PRIMARY KEY, FOREIGN KEY, and CHECK

- A PRIMARY KEY constraint is a rule that the values in one column or a combination of columns must uniquely identify each row in a table
- No primary-key value can appear in more than one row in the table
- To satisfy a PRIMARY KEY constraint, both of the following conditions must be true:
 - -No column that is part of the primary key can contain a null
 - -A table can have only one primary key

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

Copyright © 2020, Oracle and/or its affiliates. All rights reserved.

Whilst a table can have only one PRIMARY key, it may be made up of more than one column. This is known as a composite PRIMARY KEY.

A SIMILITY SIIIX

PRIMARY KEY Constraints

- PRIMARY KEY constraints can be defined at the column or the table level
- However, if a composite PRIMARY KEY is created, it must be defined at the table level
- When defining PRIMARY KEY columns, it is a good practice to use the suffix _pk in the constraint name
- For example, the constraint name for the PRIMARY KEY column named client_number in table named CLIENTS could be clients_client_num_pk

DP 14-2
PRIMARY KEY, FOREIGN KEY, and CHECK

 In a CREATE TABLE statement, the column-level PRIMARY KEY constraint syntax is stated:

```
CREATE TABLE clients

(client_number NUMBER(4) CONSTRAINT clients_client_num_pk

PRIMARY KEY,

first_name VARCHAR2(14),

last_name VARCHAR2(13));
```

- Note that the column-level simply refers to the area in the CREATE TABLE statement where the columns are defined
- The table level refers to the last line in the statement below the list of individual column names

DP 14-2
PRIMARY KEY, FOREIGN KEY, and CHECK

 To create the PRIMARY KEY constraint at table-level the syntax is:

```
CREATE TABLE clients
(client_number NUMBER(4),
  first_name VARCHAR2(14),
  last_name VARCHAR2(13),
CONSTRAINT clients_client_num_pk PRIMARY KEY
(client_number));
```

 Note that the PRIMARY KEY column name follows the constraint type, and is enclosed in parenthesis

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

- To define a composite PRIMARY KEY, you must define the constraint at the table level rather than the column level
- An example of a composite primary key constraint is shown below:

```
CREATE TABLE copy_job_history
(employee_id NUMBER(6,0),
  start_date DATE,
  job_id VARCHAR2(10),
  department_id NUMBER(4,0),
CONSTRAINT copy_jhist_id_st_date_pk PRIMARY KEY(employee_id,
  start_date));
```

ORACLE

Academy

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

FOREIGN KEY (REFERENTIAL INTEGRITY) Constraints

- FOREIGN KEY constraints are also called "referential integrity" constraints
- Foreign Key constraints designate a column or combination of columns as a foreign key
- A foreign keys links back to the primary key (or a unique key) in another table, and this link is the basis of the relationship between tables

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

Viewing a Foreign Key

 The table containing the foreign key is called the "child" table and the table containing the referenced key is called the "parent" table

DEPARTMENTS - Parent

DEPARTMENT_ID	DEPT_NAME	MANAGER_ID	LOCATION_ID
90	Executive	100	1700
110	Accounting	205	1700
190	Contracting	-	1700

EMPLOYEE - Child

EMPLOYEE_ID	FIRST_NAME	LAST_NAME	DEPARTMENT_ID
100	Steven	King	90
101	Neena	Kochhar	90
102	Lex	De Haan	90
205	Shelley	Higgins	110
206	William	Gietz	110

\square /	\mathbf{r}	
\ /·	1

11

Note: only partial data is shown for both tables.

Viewing a Foreign Key

 In the tables shown, the primary-key of the DEPARTMENTS table, department_id, also appears in the EMPLOYEES table as a foreign-key column

DEPARTMENTS - Parent

DEPARTMENT_ID	DEPT_NAME	MANAGER_ID	LOCATION_ID
90	Executive	100	1700
110	Accounting	205	1700
190	Contracting	-	1700

EMPLOYEE - Child

EMPLOYEE_ID	FIRST_NAME	LAST_NAME	DEPARTMENT_ID
100	Steven	King	90
101	Neena	Kochhar	90
102	Lex	De Haan	90
205	Shelley	Higgins	110
206	William	Gietz	110

ORACLE

Academy

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

Referential-integrity Constraint

 To satisfy a referential-integrity constraint, a foreignkey value must match an existing value in the parent table or be NULL

DEPARTMENTS - Parent

	DERAI	RTMENT_ID	DEPT_NAME	MANAGER_ID	LOCATION_ID
1	90		Executive	100	1700
1	110		Accounting	205	1700
	190		Contracting	-	1700

EMPLOYEE - Child

EMPLOYEE_ID	FIRST_NAME	LAST_NAME	DEPARTMENT_ID
100	Steven	King	90
101	Neena	Kochhar	90
102	Lex	De Haan	90
205	Shelley	Higgins	110
206	William	Gietz	110

ORACLE

Academy

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

Referential-integrity Constraint

 A primary-key value can exist without a corresponding foreign-key value; however, a foreign-key must have a corresponding primary key

DEPARTMENTS - Parent

DEPARTMENT_ID	DEPT_NAME	MANAGER_ID	LOCATION_ID
90	Executive	100	1700
110	Accounting	205	1700
190	Contracting	-	1700

EMPLOYEE - Child

EMPLOYEE_ID	FIRST_NAME	LAST_NAME	DEPARTMENT_ID
100	Steven	King	90
101	Neena	Kochhar	90
102	Lex	De Haan	90
205	Shelley	Higgins	110
206	William	Gietz	110

ORACLE

Academy

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

Referential-Integrity Constraint Rule

 The rule is: before you define a referential-integrity constraint in the child table, the referenced UNIQUE or PRIMARY KEY constraint on the parent table must already be defined

DEPARTMENTS - Parent

DEPARTMENT_ID	DEPT_NAME	MANAGER_ID	LOCATION_ID
90	Executive	100	1700
110	Accounting	205	1700
190	Contracting	-	1700

EMPLOYEE - Child

EMPLOYEE_ID	FIRST_NAME	LAST_NAME	DEPARTMENT_ID
100	Steven	King	90
101	Neena	Kochhar	90
102	Lex	De Haan	90
205	Shelley	Higgins	110
206	William	Gietz	110

ORACLE

Academy

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

Referential-Integrity Constraint Rule

 In other words, you must first have a parent primary key defined before you can create a foreign key in a child table

DEPARTMENTS - Parent

DEPARTMENT_ID	DEPT_NAME	MANAGER_ID	LOCATION_ID
90	Executive	100	1700
110	Accounting	205	1700
190	Contracting	-	1700

EMPLOYEE - Child

EMPLOYEE_ID	FIRST_NAME	LAST_NAME	DEPARTMENT_ID
100	Steven	King	90
101	Neena	Kochhar	90
102	Lex	De Haan	90
205	Shelley	Higgins	110
206	William	Gietz	110

Academy

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

FOREIGN KEY Constraint

- To define a FOREIGN KEY constraint, it is good practice to use the suffix _fk in the constraint name
- For example, the constraint name for the FOREIGN KEY column department_id in the employees table could be named emps_dept_id_fk

DP 14-2
PRIMARY KEY, FOREIGN KEY, and CHECK

FOREIGN KEY Constraint Syntax

- The syntax for defining a FOREIGN KEY constraint requires a reference to the table and column in the parent table
- A FOREIGN KEY constraint in a CREATE TABLE statement can be defined as follows
- Column-level syntax example:

```
CREATE TABLE copy_employees

(employee_id NUMBER(6,0) CONSTRAINT copy_emp_pk PRIMARY KEY,
first_name VARCHAR2(20),
last_name VARCHAR2(25),
department_id NUMBER(4,0) CONSTRAINT c_emps_dept_id_fk

REFERENCES departments(department_id),
email VARCHAR2(25));

ORACLE

Academy

DP 14-2
PRIMARY KEY, FOREIGN KEY, and CHECK
Constraints

Copyright © 2020, Oracle and/or its affiliates. All rights reserved. 18
```

NOTE: when defining a foreign key at column level the words "foreign key" are NOT included.

FOREIGN KEY Constraint Syntax

- The syntax for defining a FOREIGN KEY constraint requires a reference to the table and column in the parent table
- A FOREIGN KEY constraint in a CREATE TABLE statement can be defined as follows
- Table-level syntax example:

```
CREATE TABLE copy_employees

(employee_id NUMBER(6,0) CONSTRAINT copy_emp_pk PRIMARY KEY,

first_name VARCHAR2(20),

last_name VARCHAR2(25),

department_id NUMBER(4,0),

email VARCHAR2(25),

CONSTRAINT c_emps_dept_id_fk FOREIGN KEY (department_id)

REFERENCES departments(department_id));

ORACLE

Academy

DP 14-2

PRIMARY KEY, FOREIGN KEY, and CHECK
Constraints

Copyright © 2020, Oracle and/or its affiliates. All rights reserved.
```

NOTE: when defining a foreign key at column level the words "foreign key" ARE included before the name of the table and column that has the constraint.

Marin Sink

ON DELETE CASCADE - Maintaining Referential Integrity

- Using the ON DELETE CASCADE option when defining a foreign key enables the dependent rows in the child table to be deleted when a row in the parent table is deleted
- If the foreign key does not have an ON DELETE CASCADE option, referenced rows in the parent table cannot be deleted
- In other words, the child table FOREIGN KEY constraint includes the ON DELETE CASCADE permission allowing its parent to delete the rows that it refers to

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

ON DELETE CASCADE - Maintaining Referential Integrity

DEPARTMENTS - Parent

DEPARTMENT_ID	DEPT_NAME	MANAGER_ID	LOCATION_ID
90	Executive	100	1700
110	Accounting	205	1700
190	Contracting	-	1700

EMPLOYEE - Child

EMPLOYEE_ID	FIRST_NAME	LAST_NAME	DEPARTMENT_ID
100	Steven	King	90
101	Neena	Kochhar	90
102	Lex	De Haan	90
205	Shelley	Higgins	110
206	William	Gietz	110

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

ON DELETE CASCADE

- If the department_id column in employees was created with the ON DELETE CASCADE option specified, the DELETE statement issued on the departments table will execute
- If the ON DELETE CASCADE option was not specified when the FOREIGN KEY was created, an attempt to delete a department from the departments table that has entries in the employees table will fail

DP 14-2
PRIMARY KEY, FOREIGN KEY, and CHECK

ON DELETE CASCADE Syntax

Table created without ON DELETE CASCADE:

```
CREATE TABLE copy_employees

(employee_id NUMBER(6,0) CONSTRAINT copy_emp_pk PRIMARY KEY,
first_name VARCHAR2(20),
last_name VARCHAR2(25),
department_id NUMBER(4,0),
email VARCHAR2(25),
CONSTRAINT cdept_dept_id_fk FOREIGN KEY (department_id)
REFERENCES copy_departments(department_id));
```

 An attempt to delete department_id 110 from the departments table fails as there are dependent rows in the employee table

```
ORA-02292: integrity constraint (US_A009EMEA815_PLSQL_T01.CDEPT_DEPT_ID_FK) violated - child record found
```

ORACLE

Academy

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

ON DELETE CASCADE Syntax

Table created with ON DELETE CASCADE:

```
CREATE TABLE copy_employees

(employee_id NUMBER(6,0) CONSTRAINT copy_emp_pk PRIMARY KEY,
first_name VARCHAR2(20),
last_name VARCHAR2(25),
department_id NUMBER(4,0),
email VARCHAR2(25),

CONSTRAINT cdept_dept_id_fk FOREIGN KEY (department_id)

REFERENCES copy_departments(department_id) ON DELETE CASCADE);
```

- An attempt to delete department_id 110 from the departments table succeeds, and the dependent rows in the employee table are also deleted
- 1 row(s) deleted

Academy

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

Copyright © 2020, Oracle and/or its affiliates. All rights reserved.

NOTE: when the foreign key is defined with ON CASCADE DELETE, no warning is issued that deleting row(s) from the parent table will mean that dependant rows in the child table are also deleted.

ON DELETE SET NULL

 Rather than having the rows in the child table deleted when using an ON DELETE CASCADE option, the child rows can be filled with null values using the ON DELETE SET NULL option

```
CREATE TABLE copy_employees

(employee_id NUMBER(6,0) CONSTRAINT copy_emp_pk PRIMARY KEY,
first_name VARCHAR2(20),
last_name VARCHAR2(25),
department_id NUMBER(4,0),
email VARCHAR2(25),

CONSTRAINT cdept_dept_id_fk FOREIGN KEY (department_id)
REFERENCES copy_departments(department_id) ON DELETE SET NULL);
```

Academy

DP 14-2
PRIMARY KEY, FOREIGN KEY, and CHECK

ON DELETE SET NULL

- This could be useful when the parent table value is being changed to a new number such as converting inventory numbers to bar-code numbers
- You would not want to delete the rows in the child table
- When the new bar-code numbers are entered into the parent table, they would then be able to be inserted into the child table without having to totally re-create each child table row

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

CHECK Constraints

- The CHECK constraint explicitly defines a condition that must be met
- To satisfy the constraint, each row in the table must make the condition either True or unknown (due to a null)
- The condition of a CHECK constraint can refer to any column in the specified table, but not to columns of other tables

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

CHECK Constraint Example

 This CHECK constraint ensures that a value entered for end_date is later than start_date

 As this CHECK CONSTRAINT is referencing two columns in the table, it MUST be defined at table level

Academy

DP 14-2
PRIMARY KEY, FOREIGN KEY, and CHECK

CHECK Constraint Conditions

- A CHECK constraint must only be on the row where the constraint is defined
- A CHECK constraint cannot be used in queries that refer to values in other rows
- The CHECK constraint cannot contain calls to the functions SYSDATE, UID, USER, or USERENV
- The statement CHECK(SYSDATE >'05-May-1999') is not allowed

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

CHECK Constraint Conditions

- The CHECK constraint cannot use the pseudocolumns CURRVAL, NEXTVAL, LEVEL, or ROWNUM
- The statement CHECK(NEXTVAL > 0) is not allowed
- A single column can have multiple CHECK constraints that reference the column in its definition
- There is no limit to the number of CHECK constraints that you can define on a column

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

CHECK Constraint Syntax

- CHECK constraints can be defined at the column level or the table level
- The syntax to define a CHECK constraint is:
 - -Column-level syntax:

-Table-level syntax:

CONSTRAINT employees min sal ck CHECK (salary > 0)

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK

Terminology

- Key terms used in this lesson included:
 - -CHECK constraint
 - -FOREIGN KEY constraint
 - -REFERENCES
 - -NOT NULL
 - -ON DELETE CASCADE
 - -ON DELETE SET NULL
 - -PRIMARY KEY constraint

DP 14-2
PRIMARY KEY, FOREIGN KEY, and CHECK

Summary

- In this lesson, you should have learned how to:
 - Define and give an example of a PRIMARY KEY, FOREIGN KEY, and CHECK constraint
 - Explain the purpose of defining PRIMARY KEY, FOREIGN KEY, and CHECK constraints
 - Demonstrate the creation of constraints at the column level and table level in a CREATE TABLE statement
 - Evaluate a business problem requiring the addition of a PRIMARY KEY and FOREIGN KEY constraint and write the code to execute the change

DP 14-2 PRIMARY KEY, FOREIGN KEY, and CHECK
